

Modbus Air Pressure Sensor with I/O extension

QBM3700..

QBM3700.. air pressure sensor with I/O extension is designed for Modbus RTU communication networks. The QBM3700.. offers easy installation and less plant wiring with HVAC industry wide proven sensor technology.

- Modbus RTU communication interface
- Two analog inputs for 0...10 V or passive temperature elements
- Two analog outputs for 0...10 V
- Available with a differential pressure sensor element
- Pressure sensor elements with high accuracy and long-term stability via ceramic strain-gauge technology at different pressure ranges from 0...500 – 2500 Pa
- Decentralized node provides simple installation and less wiring
- DIP switches for addressing and Modbus line termination
- Push button for automated on-event addressing together with Siemens Climatix controllers

QBM3700.. Modbus air pressure sensor with I/O extension

The QBM3700.. comes with one sensor element and with different pressure ranges for power and communication.

QBM3700..

Type / ASN	Order number / SSN	Pressure range	Inputs/ outputs	MOQ
Types with 1 sensor				
QBM3700-5/MO	S55720-S487	1x 0...500 Pa	2 AI, 2 AO	1
QBM3700-13/MO	S55720-S485	1x 0...1250 Pa	2 AI, 2 AO	1
QBM3700-25/MO	S55720-S486	1x 0...2500 Pa	2 AI, 2 AO	1

Ordering

When ordering a QBM3700.. Modbus air pressure sensor with I/O extension, please specify the quantity and type.

Please observe the minimum order quantity (MOQ). One ASN order equals a box with one sensor.

Please contact your Siemens sales regional center for other QBM3700.. types or custom orders.

Accessories

Type / ASN	Order number / SSN	Designation
FK-PZ1	BPZ:FK-PZ1	Air duct probe for differential pressure sensor, short, adjustable
FK-PZ2	BPZ:FK-PZ2	Air duct probe for differential pressure sensor, long, adjustable
FK-PZ3	BPZ:FK-PZ3	Air duct probe for differential pressure sensor, fixed length

Focus segment

- Air handling units (AHU), with communication between controller and field devices and connected to cloud enabling plant digitalization.
- Support of Ecodesign directive ErP 2016/2018 through the use of bus-compatible sensors for monitoring filters, including cloud visualization.

Typical use

The QBM3700.. Modbus air pressure sensor and I/O extension is used in ventilation systems and air handling units (AHU):

- To measure and monitor pressure in air ducts and over filters and fans
- On the supply and extract air side

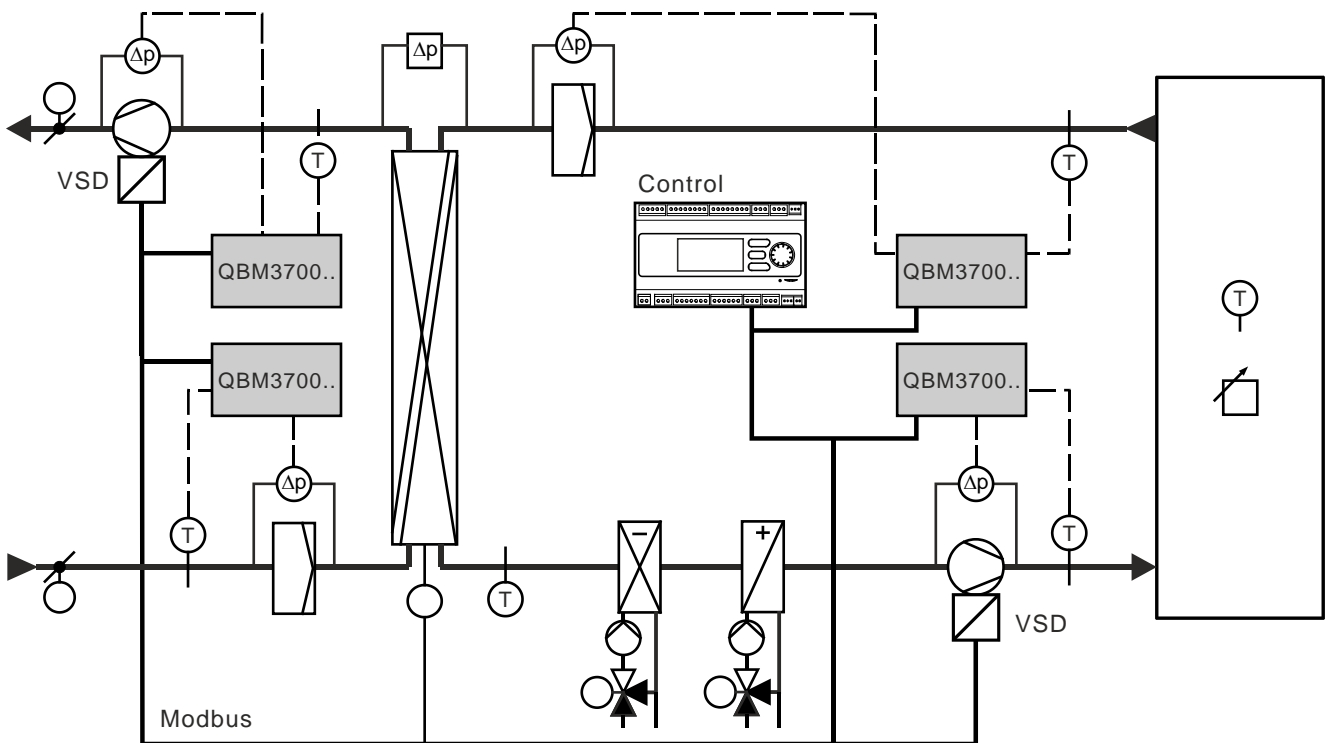

The QBM3700.. is ideally suited for a multitude of tasks in the HVAC industry:

- Measures relative and differential pressure and flow of air and non-aggressive gases
- Available with a differential pressure sensor
- Allows monitoring of pressure or volume flow at two individual points in the system

Topology

AHU topology with Modbus field devices and sensors

- The following digital AHU topology illustrates an example for using the QBM3700..

Sensor technology

The built-in sensors of the QBM3700.. are based on the unique and in HVAC and automotive industry well-proven ceramic strain-gauge beam technology.

- The accurate sensors with long-term stability for all measured variables are completely maintenance free, providing cost savings over the life of the plant.
- The sensor elements are also suited for demanding applications in the food or pharmaceutical industry.

• The sensor elements are also suited for demanding applications in the food or pharmaceutical industry. Decentralized node via Modbus (RTU) combined with inputs/outputs

The QBM3700.. with its Modbus communication interface is a decentralized node, when using the inputs and outputs for sensors and field devices:

- For example temperature sensors can be linked to the analog inputs and actuators linked to the analog outputs.
- Having these elements on Modbus reduces wiring and installation costs.

Innovative housing design with quick release fasteners

The housing of the QBM3700.. comes with quick release fasteners, which can be pushed in by hand, making screws and tools for opening and closing the sensor unnecessary. The innovative housing design is based on a patented sealing, injected directly during the plastic injection molding process. A high protection grade of IP54 is guaranteed, providing a wide range of application areas.

Workflows and "How to instructions" are available in document A6V11841988. See Section Supplemental information [→ 11].

DIP switches for addressing and Modbus line termination

For flexible use and wide range of application the QBM3700.. Modbus air pressure sensor with I/O extension can be addressed via its DIP switches with controllers other than Climatix controllers.

Push button for automated on-event addressing together with Climatix controllers

The QBM3700.. can be paired (addressed) easily and fast with Climatix controllers with the inbuilt push button for on-event addressing. On-event push button addressing is implemented in Siemens Modbus sensors and devices for digital air handling units (AHU), providing a consistent, easy and fast commissioning process for manufacturers and installers.

Zero point factory reset

Resetting to factory settings or zero point is easy.

Siemens as global technology partner

The QBM3700.. is distributed globally via the Siemens sales network. . The sensor is tested according to the major international standards such as EU and RCM conformity, UL approbation and EAC, making possible a worldwide field of application. Continuous innovations and development, as well as sustained quality, logistic processes, spare parts management and customer support make Siemens a valued technology partner.

Workflows and 'How to instructions' for the DIP switches and the push button can be found in A6V11841988. See Section Supplemental information [→ 11].

DIP switches

- Use DIP switches for adjustment of the Modbus address (DIPs 1 to 8) and for Modbus line termination (DIP 9).
- The DIP switches have priority over register 'Modbus address'.

Button

User guide: Modbus air pressure sensor with I/O extension: QBM3700..	Installation, commissioning, engineering, maintenance and Modbus registers	A6V11841988

The documents can be downloaded at <http://siemens.com/bt/download>.

Safety: National regulations

	⚠ CAUTION
	<p>National safety regulations</p> <p>Failure to comply with national safety regulations may result in personal injury and property damage.</p> <ul style="list-style-type: none"> • Observe national provisions and comply with the appropriate safety regulations.

Mounting**Mounting location**

QBM3700.. air pressure sensor with I/O extension is suited for direct mounting on air ducts, walls, or in control panels. The following points must be observed.

Detailed information on mounting is available in document A6V11841988. See Supplemental information [→ 11].

	NOTICE
	<p>Inaccurate measurements due to wrong mounting location.</p> <p>An environment subject to high pressure pulses and/or significant thermal changes can lead to inaccurate measurements and/or zero shift.</p> <ul style="list-style-type: none"> • Avoid the these kinds of mounting locations. • A zero shift can be corrected with the function zero point reset.

Mounting location

	NOTICE
	<p>Condensation and damage to the device</p> <p>If the pressure connection nipples point upwards or are at a lower level than the air duct probes, condensation can collect inside the sensor, causing damage to the device.</p> <ul style="list-style-type: none"> • Mount QBM3700.. vertically with pressure nipples facing down. • Mount QBM3700.. higher than the duct probes.

Connecting tubes

	NOTICE
	<p>Damage to the device when mounting or removing the device.</p> <p>The device can be damaged, if the system is not depressurized when mounting or removing it.</p> <ul style="list-style-type: none"> • Depressurize the system prior to mounting or removing the sensor.

The pressure tubing for the sensor nipples are connected as following to the differential pressure sensor:

On the air duct side	On the pressure sensor side
Tubing with higher pressure side (lower vacuum)	Connect to pressure nipple "+".
Tubing with lower pressure side (higher vacuum)	Connect to pressure nipple "-".

Wiring

	<p>NOTICE</p>
	<p>Polarity reversal protection</p> <p>The device is short circuit proof and protected against polarity reversal. Each connection is protected against crossover up to maximum supply voltage.</p>

Disposal

	<p>The device is considered an electronic device for disposal in accordance with the European Guidelines and may not be disposed of as domestic garbage.</p> <ul style="list-style-type: none"> • Dispose of the device through channels provided for this purpose. • Comply with all local and currently applicable laws and regulations.
